Transformation and Transaction through COVID-19 and after

Not only was entertainment fully focused on the virtual work like gaming but also the education sector. Classes were made virtual.

Due to the COVID-19 lockdown the schools were forced to lockdown which enabled virtual learning to be introduced. I in the other hand completed my 9th and half of 10th grade through the virtual classes.

During this lockdown it might have seen that people were un-productive, however people were introduced and learnt skills related to various online sources, staying at home. Moreover some people might also have learnt how to use computers properly than before. As classes were virtual assignments and to be done through the use of different softwares. Me in the other hand learnt the difference between the word doc. and power point presentation. Similar things can be said about other things I had learnt.

During this period of time people were forced to wear mask as it did prevent the extent of getting infected. However did leave out bad traits. As I stand here in the aftermath of the COVID-19, people are left with insecurities. Now, wearing a mask is not for the COVID-19 but to hide hide faces. It more like fashion.

In schools right now, I have heard ^{incorporated} teachers requesting students to take their mask off while giving their presentation or performing in stage. That was quite an amusing incident I ^{incorporated}.

Now in the 'new normal' post COVID-19, we are left with people wearing masks as fashion, "most of them", and have introduced our selves with AI. Although, it might be fairly new, AI's such as Chat GPT have influenced alot in the current education system. It provides with precise answers with accuracy. This has led to the ban of it in many colleges throught the world. Moreover, unlike before the education system has become very flexible. Protests, riots, strikes will not stop schools and colleges from ~~not~~ providing education due to the modern intangible equipments like softwares and tangible gadgets as phones, and computers.

In conclusion, the pandemic has changed us. We have grown cautious but also smart. We may have suffered but now more flexible. It may have taken 2-3 B two or more years however ~~but~~ are ~~dear~~ trained to overcome such obstacles which has lead us decades into the future. This is my view and transformation and transaction through COVID-19 and after.
